SAY HELLO TO THE NEW

THE HEART OF THE B-CLASS

Our Gravis combines the highest safety characteristics with a powerful performance and precision. As cross country glider with strong thermal and hike & fly characteristics which can be found in the heart of the EN-B category.

FLAT AREA

WEIGHT RANGE

Weight at size M: 4,4 kg

WHO IS IT FOR

Due to the highest levels of current construction technology and material choice the GRAVIS is perfectly suitable for all cross country and thermal pilots but also for EN-B newcomers.

THE CHARACTERISTICS

A minimal impulse at the A-lines is enough to fill this light weight evenly and to raise it constantly without hanging back.

The high passive safety gives you a secure feeling at all times. Nevertheless the steering impulses are being transferred easily and precisely to the canopy. The perfectly balanced steering behavior enables you to center the Gravis in thermals and difficult and wind shifted thermal tubes.

The Gravis has excellent gliding abilities, even in moving air, also due to its minimalistic line structure. However its complete performance is only shown when the speed bar is pressed. This takes it in the top performance category.

The well-balanced mixture out of safety, precision and performance makes Gravis to the ideal companion for stress-free-, fun-, thermal- and cross country flights.

THE LOOK

Like all Icaro gliders the design of Sitta is determined by a unique detail of the Icaro Edelweiss flower, selected to match the characteristics of the glider and your desire to make a good impression in the sky.

You can choose your style from one of those two color options:

ICARO Paragliders
